## Full-Field Peripheral Blood Smear Application

See more. Do more. Diagnose faster.

### Full-Field Peripheral Blood Smear Application

See more. Do more. Diagnose faster.

#### **Full-Field Imaging**

A full-field digital view of the sample, including the monolayer and the feathered edge, eliminates the need to default back to the manual microscope. While manual microscopy at 100X has been the gold-standard for the PBS review requiring a lab technician to manually and laboriously count and classify 100-200 cells, digitalization and automation efforts to transform this manual industry have been limited by the trade off between resolution and field of view.

The Full-Field Peripheral Blood Smear (FF-PBS) Application on the X100 platform is an end to end digital morphology solution that completely supplants the manual microscope by combining breakthrough full-field imaging of blood samples and an Al-powered Decision Support System (DSS) that empowers practitioners to conduct WBC differentials, RBC morphology evaluation, and platelet estimations more efficiently and consistently than ever before.

#### End to End Digital Workflow

The FF-PBS Application reduces turnaround time for sample reviews by 60%, representing significant optimization of lab workflows and operational efficiencies.

#### **A True Remote Solution**

Regardless of location, experts have the same access to the fullfield images and insights as anyone in the lab, for seamless review, collaboration or consultation in real-time.

3

# An end to end digital PBS analysis with zero compromises.

#### Imaging – High Resolution and Full-Field Perspective

Scopio Labs' revolutionary technology uses computational photography to provide unprecedented images of vast numbers of cells, including the monolayer and the feathered edge. Lab practitioners have a full-field view of the sample at 100X magnification.

See the image in full context or zoom in to the smallest details, both of which are vital for confident clinical decision-making.

#### Morphology Decision Support System Powered by Al

Scopio's clinical-grade AI automatically performs WBC detection to analyze 200 WBCs and pre-classify into 16 classes. Combine this powerful WBC differential with automatic platelet location and pre-estimation from 10 FOVs, and red blood cell (RBC) morphology evaluation from 1000 Fields of View (FOVs), Scopio brings a new level of standardization and confidence to cases regardless of who conducts the review. The results from the review are consistent, repeatable, traceable, and always human affirmed.

#### A Flexible, Easy to Use Digital Workflow

Labs can experience a completely digital hematology workflow that yields a 60% more efficient workflow while delivering more consistent results.

The FF-PBS provides lab practitioners with an intuitive user interface and easy to use application to approve, reclassify, or augment cases with comments, insights and annotations. Lab technicians can see the full context of the scan, pan, and zoom with point-and-click speed and ease, and rapidly configure the different aspects of the digital workflow for improved workflow efficiency.

The results of every assessment, including images, annotations and flagged abnormalities, are all automatically documented in a standardized digital report that is easily shared across the continuum of care.

#### **Real-Time Collaboration, Anywhere**

Scopio's browser-based true remote workflow solution means offsite colleagues, hematopathologists and clinicians can review, collaborate or consult from any location in real-time. They have the same secure access to the entire digital case as anyone in the lab, with the ability to see the entire full-field image or zoom in on any area of interest at 100X. The result is that remote review and second-opinion referrals can happen instantly, treatment can begin faster and with greater confidence.

#### The Best of All Worlds at Digital Speed

With the FDA cleared and CE marked Full-Field Peripheral Blood Smear (FF-PBS) Application on the X100, Scopio offers adaptive monolayer detection, full-field imaging of the monolayer and the feathered edge at 100X magnification, and a decision support system powered by Al that enables reliable and consistent diagnostic capabilities.

Highlights of the FF-PBS Application on the X100 include:

- The X100 platform with three-slide loader capacity
- Different scan modes for various clinical conditions and optimum throughout
- Al-supported differential with 200-cell WBC detection and pre-classification to 16 cell classes
- Al-supported platelet pre-estimation from 10 FOVs
- RBC morphology evaluation from 1000 FOVs
- ICSH-standard PBS digital report
- Unlimited flexibility to confirm or modify system-generated fields of view, estimations, and classifications
- State of the art user interface for enhanced user experience
- Fully traceable, reproducible results and documentation
- Full remote access for analysis, review and annotation from any location in real-time, without the need for local software install
- Integration with clinical LIS
- Image and analysis storage for educational and research purposes

#### **Technical Specifications Scopio X100**

#### Slide Throughput

15 Slides/h for 200 WBC differential

3-slide tray

Artificial Intelligence & Scan Features

200 WBC pre-classified into 16 classes

Platelet pre-estimation

≈ 1000 high power fields of view available for monolayer + RBC evaluation

**Slide Properties** 

Accepts standard slides

Round / square corners

Ground / clipped edges

#### Slide Preparation Method

Manual

Semi / Fully Automated

Stains

Romanowsky stains (May Grunwald, Giemsa, Wright Giemsa, Wright)

Stain Quality Control

Daily routine automated check-up

System Size (WxDxH)

32 × 36 × 38 cm

12.5 × 14 × 15 inches

**Processing Unit Size** 

19 × 42 × 52 cm

7.5 × 16.5 × 20.5 inches

System Weight

13 Kg / 28.7 lbs

**Electrical Specifications** 

Power supply supports 100-240 VAC, 50-60 Hz

Storage Capacity

1.5K full-field cases, including images + analysis layer, and 15K reports

Lab Communications

LIS support

**Scopio Labs** (www.scopiolabs.com) is transforming the process of cell morphology analysis, offering a suite of fully digital diagnostic applications and platforms that drastically enhance clinical workflows and enable faster, earlier, and more accurate detection and diagnosis of disease, thus expediting patients' access to life-saving treatments.
